COEP Technological University

EDUCATION

COEP Technological University

B.Tech (Electronics & Telecommunication Engg.)

Minor in AI&ML (2024-2028)

JEE Mains — 96.98 percentile

MHT-CET — 99.65 percentile

EXPERIENCE

Softwin Infotech

Database Intern (SQL & MySQL)

6 Weeks, concluded July 2026

SKILLS

Programming:

Python, C, SQL

Microcontrollers:

ESP32, ESP32-CAM

Protocols:

I2S, I2C, UART, Bluetooth

Hardware:

Op-amps, Signal Conditioning, OLED, I2S Amplifiers

APIs:

Groq LLaMA, Google TTS

Databases:

SQL, MySQL

Non-Technical:

Event Coordination, Team Management, Community Outreach

Aditi Pore

COEP Technological University | VU39AP

About Me

Third-year Electronics and Telecommunication Engineering student at COEP Technological University, pursuing a Minor in AI & ML. Experienced in building AI-powered assistive devices, analog signal processing circuits, and wireless communication systems using ESP32 and op-amps. Licensed amateur radio operator (VU39AP) and Secretary of the COEP Amateur Radio Club, combining technical depth with leadership and real-world impact.

Experience

Database Intern — Softwin Infotech

SQL · MySQL · 6 Weeks · Concluded July 2026

Worked with SQL and MySQL to manage and troubleshoot real-world databases. Applied academic understanding of database systems to production-level challenges, strengthening query writing, debugging, and data-driven problem solving skills, with exposure to how database technologies function in an actual business environment.

Projects

AI Vision Assistant for Visually Impaired

ESP32-CAM · Groq LLaMA API · Google TTS · I2S

Built an ESP32-CAM device that captures surroundings, sends images to Groq LLaMA for scene analysis, and converts descriptions to speech via I2S. Added Base64 encoding, REST API calls, an OLED status display, and low-light flash support.

Seven-Stage Analog EMG Signal Processing Circuit

TL071 Op-Amps · Analog Front-End · EMG

Designed a seven-stage analog front-end for surface EMG signals using TL071 op-amps. Includes an instrumentation amplifier (gain 201), band-pass filtering, a 50 Hz notch filter, and an envelope detector, achieving ~10,000 V/V gain with a clean 0-5V DC output for prosthetic motor control.

KHN State-Variable Audio Filter

Op-Amp Based · Active Filter · ANC

Designed a Kerwin-Huelsman-Newcomb active filter at 1 kHz with simultaneous LP, BP, and HP outputs and independent Q/frequency control, serving as a low-cost analog alternative to DSP in ANC systems.

Accelerometer-Based Air Mouse Using Microcontroller

ESP32 · MPU6050 · Bluetooth HID

Built a motion-controlled air mouse using ESP32 and MPU6050, translating hand tilt into cursor movement via BLE HID. Added debounced click buttons, scroll mode, and a battery-powered portable design.

Extracurricular

- Amateur Radio License (Restricted Grade) — VU39AP
- Secretary (June 2026-Present), COEP Amateur Radio Club (VU2COE)
- Volunteer, COEP Amateur Radio Club (VU2COE) (2024-2026)
- NGO Volunteer, Azad Nayakawadi Foundation, Kolhapur
- Volunteer, Mindspark 2024, COEP Technological University
- Badminton Player

Licenses

Amateur Radio License

Restricted Grade

Ministry of Communications, Govt. of India
